Education

Seoul National University, Seoul, Korea

bachelor's degree, Expected Graduation: 02/2029

Relevant coursework

- Engineering Mathematics
- Data Structure
- Computer Programming
- Computer Architecture
- Logic Design
- Discrete Mathematics
- Programming Practice
- Digital Computer Concept and Practice

Skills

- **Technical Skills**
 - Capable of programming in C, C++, C#, JAVA, Kotlin, Python
 - Capable of using frameworks such as Spring Boot and Unity
- **Other Skills**
 - Proficiency in English (TEPS: 575, TOEIC: 990)
 - Certificate for *Computer Specialist in Spreadsheet & Database Level-2* and *Craftsman Programming*

Experience

Siksha, Waffle Studio

03/2026 – 06/2026

- I have been contributing to Siksha project in Waffle Studio, an application development club in Seoul National University, as a server engineer, since this semester.
- I devised a new database structure to store user customization settings, which

was formerly stored by frontend. Also, using language models, I created a program which clusters different menu names into one standardized name.

- During this experience, I was able to grow fond of Spring Boot and JPA, not to mention that I could go through a concrete experience of application development. I also learned how to access and manage databases via Kubernetes.
